

(i) time-series dataset

pyhctsa

compute features

`.extract()`

(ii) feature matrix

(iii) what features?

hctsa.yaml

entropy

└ permutation_entropy

└ m = 2, tau = 1

└ m = 3, tau = 1

└ m = 4, tau = 1

medical

└ pol_var

└ d = 1.0, D = 3

└ d = 1.0, D = 4

└ d = 0.5, D = 6

YAML

`calc = FeatureCalculator(config.yaml)`

(iv) what data?

`calc.extract(data)`

(v) what output?
